*For a morning tea & trade display with Bio-Rad at TRI*  
**Wednesday the 6th of September**

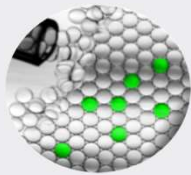

**Location:** Tea room, Level 7  
**Time:** 9:30-11:30am

Bio-Rad Laboratories offers solutions that are customizable to fit perfectly with drug discovery, development, and manufacturing to help you drive efficiency in target identification, candidate screening, assay development, and protein or antibody production, from small scale to large scale.

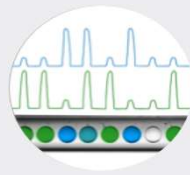

## Learn about our newest technology for better workflows

Make Droplets  
Droplets

PCR Droplets

Read

### Droplet digital PCR (ddPCR):

ddPCR is a breakthrough technology that provides absolute quantification of nucleic acids.

Key applications include: Rare mutation detection, Copy number variation, SNP, precise viral titers, VCN, Genome editing detection, gene expression, Liquid biopsy, Pathogen detection, Environmental monitoring, Food testing and so on...

### What is Stain-Free Imaging?

### V3 Western Workflow™ and Bio-Rad Antibodies

Options for custom antibodies as well as vast offering of antibodies and reagents for veterinary research
